### **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 17, 2008 has been entered.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was during a telephone call with Christopher L. Holt Reg. No.: 45,844 on November 19, 2008.

In claim 1: line 37, replace "period; and" with – period;--.

In claim 1: line 43, replace "biometric data." With -- biometric data; and wherein the method is performed in the consecutive order of pre-establishing, generating, maintaining, encrypting, and receiving.--.

Art Unit: 2437

Claim 2 . (Cancelled).

### **Reason for allowance**

4. After consideration of the applicant's communication filed on October 17, 2008 in response to the Office Action mailed on June 23, 2008, and through examination of claims 1, 7, 8, 15, 19-22 and 52-78, further search and proposed examiners amendment, the claims have been found in condition for allowance over prior arts of record.

5. The following is an examiner's statement of reasons for allowance:

Claim 1 includes the following features of a method which are not taught or further suggested and would not have been obvious over prior arts of record and these claimed features are: pre-establishing an encryption relation between a biometric device as firmware and a computing device; storing session number, the generated session time stamp; session key in the session packet and maintaining a record of them in a database; evaluating the session time stamp to determine whether the biometric information packet was received within a predetermined time period and the method is performed in the consecutive order or pre-establishing, maintaining encrypting and receiving.

Claim 52 includes the following features of a biometric system which are not taught or further suggested and would not have been obvious over prior arts of record and these claimed features are: the computing devices generates a session packet that is encrypted using the first encryption component and wherein the session packet comprises a session number, a session

Art Unit: 2437

key, a command, a time stamp, and a first set of data; a reader having a second encryption component, a second encryption program, and a second interface, wherein the reader generates a biometric information packet based upon the command, and the second encryption component is implemented as firmware and decrypts information encrypted by the first encryption component; and the processor selectively utilizes the model based upon a comparison of the session number to a copy of the session number retrieved from the database and a comparison of the time stamp to a time indicative of when the biometric information packet was received by the computing device.

Claim 66 includes the following features of a method which are not taught or further suggested and would not have been obvious over prior arts of record and these claimed features are: requesting an access right associated with the computing device by initiating an authorization session and generating a session packet that includes a unique session number and a public key portion of a PKI key pair; retaining a copy of the session number and a private key portion of the PKI key pair and encrypting the session packet utilizing the second encryption component; transmitting the encrypted session packet that includes the session number and the public key portion of the PKI key pair to the biometric device; comparing a time frame to a predetermined time frame, wherein the time frame is based at least partially upon the time that the encrypted biometric packet is received by the computing device; utilizing the set of biometric information based upon a determination that the retained copy of the session number matches the session number included in the biometric packet and based upon a determination that the time frame is within the predetermined time frame.

Art Unit: 2437

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
